Mary P. Carpenter

UNITED STATES PATENT OFFICE.

MARY P. CARPENTER, OF BUFFALO, NEW YORK.

IMPROVED MOP-WRINGER.

Specification forming part of Letters Patent No. 52,136, dated January 23, 1866.

To all whom it may concern:

Be it known that I, MARY P. CARPENTER, of Buffalo, in Erie county and State of New York, have invented certain new and useful Improvements in Mops; and I do hereby declare that the following is a full and exact description of the said invention.

The nature of my invention consists in combining with a mop an arrangement or device for wringing the cloth without the necessity of wetting the hands.

To enable others skilled in the art to make and use my invention, I will proceed to describe its construction and operation.

In the accompanying drawings a perspective view is shown, which represents the invention complete.

A is the handle. B is a frame into which two rollers are made to work. These rollers are marked C and D. They are made of wood

and revolve on pivots marked E, F, H, and L, and are drawn together by two springs, which are marked G and I. These springs are made to clasp each of the pivots, as will be readily seen in the drawing. J is a handle by which the rollers are turned.

The red dotted lines marked K represent an endless apron or the mop-cloth. It is drawn between the rollers, and the two ends are sewed together.

In working the water is forced from the cloth by turning the rollers by means of the handle marked J.

What I claim as my invention, and desire to secure by Letters Patent, is—

The combination of a wringer with a mop.
MARY P. CARPENTER.
